

Dominic Gabriel S. Lasap

Full-Stack Software Engineer | React · Next.js · TypeScript · Node.js · PostgreSQL

Cebu City, Philippines 6000 | +63 905 561 0116 | lasapdominic@gmail.com | Open to Remote

Portfolio: dlasap-portfolio.vercel.app | LinkedIn: linkedin.com/in/dominic-gabriel-lasap | Owned app: paddlebag.app

PROFESSIONAL SUMMARY

Full-stack software engineer with 5+ years shipping production web applications for UK, US, and Philippine clients. Builds React and Next.js front ends on Node.js, PostgreSQL, and Supabase, with strong depth in schema design, API integration, caching strategy, and server-cost optimization. Takes work from Figma mockup to live release, and has independently designed, built, and launched a full consumer product now serving real users.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3, SCSS/Sass; working knowledge of Java and Ruby

Frontend: React 19, Next.js 16 (App Router, Server Components, ISR, Turbopack), Vue.js, Tailwind CSS v4, ShadCN UI, Mantine UI, Material UI, TanStack (React) Query, Zod, Redux, Remotion, Mapbox GL, responsive & mobile-first design, accessibility (a11y), Figma-to-code

Backend & Data: Node.js, Express.js, tRPC, REST API design, PostgreSQL, Supabase (Auth, RLS policies, RPC functions, Storage, Edge), Drizzle ORM, MongoDB, Firebase, RethinkDB, Redis, Elasticsearch, MeiliSearch, Cassandra, pg-boss background workers, SendGrid

Cloud & DevOps: Vercel (edge caching, CDN, ISR, WAF/firewall rules), Docker, Git/GitHub, CI checks & PR review, database migrations, Sentry monitoring, Google Cloud/Dev Console, AWS S3 static hosting

Testing & QA: Vitest, Jest, Playwright, Postman, Insomnia, ESLint, strict TypeScript, unit & integration testing, manual UI/UX QA

AI & Automation: OpenAI API, prompt engineering, LLM-backed product features, Google AppSheet, Google Apps Script

Practices: Agile/Scrum, JIRA, Confluence, performance optimization, caching & server-cost control, technical SEO, product and UX design, analytics & retention analysis

PROFESSIONAL EXPERIENCE

PaddleBag (paddlebag.app) — Founder & Full-Stack Engineer

August 2026 – Present | Independent Product | Cebu City, Philippines (Remote)

Solo-designed, built, and launched a production pickleball community platform — player profiles, paddle and court directories, reviews, leaderboards, a social feed, open-play session hosting, and a live on-court queue. Owned every layer: product, UX, schema, API, frontend, SEO, analytics, and monetization.

- Ship and maintain a Next.js 16 / React 19 / TypeScript app on Supabase and PostgreSQL, with versioned SQL migrations and continuous deployment on Vercel.
- Diagnosed and shut down a runaway infrastructure cost spike by tracing an anomalous request flood to a single network ASN in the edge logs and deploying targeted firewall rate-limit rules, with no impact on legitimate traffic.
- Designed a cost-bounded data architecture — tagged cache revalidation with CDN s-maxage / stale-while-revalidate, per-user query fan-out replaced by batched and row-capped queries, heavy aggregation pushed into bounded Postgres RPCs — keeping origin compute flat as traffic grows.
- Built site-wide search to run at near-zero infrastructure load — anonymous visitors hit a pre-built static index (zero backend requests) while authenticated users route to a cached service-role RPC.
- Built the growth and retention stack end to end: first-touch UTM attribution at signup, a referral program with correct post-auth attribution, friend requests with gated direct messaging, weekly leaderboards, and shareable Open Graph share cards.
- Developed an internal analytics suite (ad impressions, per-person click attribution, share tracking, cost-per-signup by campaign) and ran a cohort retention analysis that redirected the product roadmap.
- Enforced authorization at the database layer with row-level security, privacy controls, and role-based admin gating rather than trusting the client.
- Owned technical SEO across public pages — dynamic sitemaps, canonical URL structure, Open Graph and meta tags, semantic HTML, indexability rules — plus disclosure-first affiliate monetization.

Tech Stack: Next.js 16, React 19, TypeScript, Supabase, PostgreSQL, Tailwind CSS v4, Zod, Mapbox GL, OpenAI API, Playwright, Vercel, Sharp.

Childcare Marketing (UK) — Software Engineer

January 2025 – October 2026 | Remote (United Kingdom)

Full-stack development on a client-facing CRM and operations platform for a childcare marketing agency.

- Built core CRM features — client filtering, campaign templates, sales-package migrations, and location/nursery management — with data-fetching performance tuning (parallelized queries, lazy-loaded modals) and paginated directories for large data sets.
- Developed an Operations Report module: account-manager workload tracking, task management with client-approval workflows, a communications overview with unresponded-message detection, and live dashboard navigation.
- Delivered an Onboarding module with a Drizzle schema for client phase ETAs, templates, links, and section settings, synced across environments.

- Integrated the GoHighLevel (GHL) CRM API — hardened OAuth token refresh, opportunity-search pagination, and error handling to keep client data reliably in sync.
- Implemented background job processing with pg-boss workers and Sentry error monitoring; hardened database security via Supabase's splinter linter and RLS policy audits.
- Owned schema migrations, type generation, and lint/type-safety cleanup; wrote and maintained automated tests with Vitest.

Tech Stack: Next.js (App Router, Turbopack), React, TypeScript, Supabase, PostgreSQL, Drizzle ORM, TanStack Query, Zod, Tailwind CSS, Sentry, GoHighLevel API, Vitest, pg-boss.

FullScale — Software Engineer

June 2022 – December 2024 | IT Park, Cebu City, Philippines

Delivered feature work for US-based clients across several long-running projects.

- **AI Shorts video app (real estate) — Frontend Developer / API Management:** Translated Figma designs into responsive production UI; implemented video effects and transitions, markdown rendering, image resizing, and image/text repositioning. Configured Next.js API routes, reviewed pull requests, and drove performance optimization through correct React hook usage.
- **Document web editor for small businesses — Full-Stack Developer:** Built document customization features (e.g., payroll templates), Microsoft Single Sign-On, ReCaptcha validation, and dashboard features across a Next.js frontend and Ruby on Rails backend.
- **Multifamily loan services platform — Developer:** Streamlined an online lending process in an Agile environment, moving from bug fixes to owning features built from mockups and JIRA acceptance criteria, consistently delivered on schedule.
- **Travel itinerary showcase — Web Developer:** Delivered frontend and backend work under a tight timeline — component implementation, bug fixing, and backend testing.

Tech Stack: Next.js, React, TypeScript, ShadCN, Mantine UI, CSS, Figma, Jest, tRPC, React Query, SQL, MongoDB, Java, Ruby on Rails, Docker, OpenAI, Remotion, JIRA.

DNA Micro — Software Engineer

May 2021 – June 2022 | Gorordo Ave., Cebu City, Philippines

- Completed an intensive full-stack training program (React, Node.js, Express, RethinkDB) and defended the resulting applications before senior engineers.
- Built TypeScript/React components on the frontend team; diagnosed and resolved data inconsistencies caused by conflicting data types in asynchronous flows.
- Promoted to the database team — troubleshoot database and API issues, supported frontend engineers with API access, and built internal services including a cross-instance data migration script, a resync service that monitored replication and alerted on inconsistencies, and a SendGrid email notification service.
- Managed dockerized images across RethinkDB, PostgreSQL, MeiliSearch, Redis, Elasticsearch, and Cassandra.

PART-TIME & CONTRACT EXPERIENCE

Reliability Management (UK) — Part-Time Software Engineer

April 2023 – Present | Remote (United Kingdom)

- Sole developer for a Reliability Centered Maintenance (RCM) engineering business. Built an AI web application (Next.js, Node.js, OpenAI) that post-processes engineer inputs through custom-engineered prompts and renders structured results as tables and text with PDF export.
- Expanded into no-code delivery with Google AppSheet, Apps Script, and Drive/Sheets — an RCM data app with PDF generation and correlated tables, using Apps Script to run JavaScript on AppSheet-triggered events; also handled Android deployment via the Google Play Console.

Filinvest — Part-Time Web Developer

December 2023 – March 2024 | Remote (Philippines)

- Upgraded a real estate website to Next.js with Tailwind CSS; resolved responsiveness issues across breakpoints, added missing features, and fixed search query and pagination behavior.

1ClickDesign — Part-Time Full-Stack Developer

April 2023 – November 2023 | Remote (Philippines)

- Built a real estate CRM (Vue.js, Tailwind CSS, Google Auth, Firebase) for managing products, customers, users, and properties, including dashboards and data management tables. Sole all-around developer, meeting daily with the owner and team.

EDUCATION

University of San Carlos — BS Computer Engineering

June 2015 – May 2020 | Talamban, Cebu City, Philippines

- Thesis: Dynamic Light Signal System for Real-Time Evacuation Guide Path During Fire Disaster.

AWARDS & RECOGNITION

- Outstanding Work and Delivery of Exceptional Results — LinkedIn Recognition, DNA Micro (May 2022).
